

CLOUD COMPUTING- LABORATORY

CAP471-CA 1

Set A

Q.1 Prepare a report in google docs. These are the instructions:

- Prepare a report (one or two pages) on any topic (The main content of the report should be Justify align).
- Add a few bullets and numbers to this report (Left align)
- Add a title, do formatting over the title as per your choice make it as center align.
- Add any link of your choice related to your report
- Add an image of your choice related to your report.
- Comment on any part of your report.

Q.2 Prepare a Marksheet for 10 students. Include marks in 5 subjects. Calculate total and percentage using both formula and functions. Prepare a chart for the same.

Q.3 Use the file Google Sheets - Complex Formulas.xls as attached on LPU live.

- Select the Challenge sheet. Let's say we want to compare two discounts. The first discount takes 20% off the total, and the second discount takes \$30 off the total.
- In cell D6, create a formula that calculates the total using the 20% off discount.
- Hint: Because we're taking 20% off, 80% of the total will remain. To calculate this, multiply 0.80 by the sum of the line totals.
- In cell D7, create a formula that subtracts 30 from the total.

Set B

Q.1 Download a Resume template from google documents and edit it according to your details.

Q.2 Use the file Google Sheets – Functions.xls as attached on LPU live.

- Select the Challenge sheet.
- Fix the formula in cell C10 so it finds the average number of units sold by all of the troops.
- In cell C11, write a function that will find the total amount of units sold by all of the troops.
- In cell C12, write a function that will find the largest number of units sold by a troop.
- In cell C13, write a function that will find the smallest number of units sold by a troop.
- In cell C12, write a function that will count the total number of units sold by a troop.

Q.3 Use the file Google Sheets - Google Sheets - Modifying Cells as attached on LPU live.

- Change the row height of all the rows to be smaller.
- Merge cells A1:I1.
- Insert a row below row 11 and type your name in the first cell.
- Delete row 7. This row contains the name, Ben Mathis.
- Insert a column between columns G and H and type Total Quantity as the column header.
- Select cells A2:J2, change them to wrap text, and center align them.
- Freeze the top two rows.

Note:

- For all answers, you should write step by step procedure in a word file. Place appropriate screenshots wherever necessary.
- After every answer, a related link to google drive must be attached.
- Share the file on my email id as well and give me access right for the same.
