- what is Oracle Virtual Box

it is a open source software by the company Oracle which allows one to create Virtual Machine/ Virtual Computer

-What is a Virtual Machine/ VirtualComputer??

a computer which has virtual existance only. we can have virtual CPU, RAM, and other things required in a physical computer, also can install OS, software etc into it.

- How to create and save a virtual Machine for future use?

1. create a virtual machine VM1 with specified configuration,
2. install Windows/Unix/Linux/Mac operating system into it.
3. optionally install anaconda distribution of python into the machine VM1
4. Use 'Export' option in VBox to save the image of the current virtual machine environment.
