

STEPS TO CREATE VIRTUAL MACHINE

Step 1: Open Oracle VM VirtualBox then click on new option.

Step 2: After opening now type the name of your machine and choose operating system and its version then click on next.

Step 3: Now you have to set memory size for the machine and then click on next.

The screenshot shows a window titled "Create Virtual Machine" with a back arrow and a close button. The section is titled "Memory size" in blue. Below the title, it says "Select the amount of memory (RAM) in megabytes to be allocated to the virtual machine." and "The recommended memory size is **2048 MB**." There is a horizontal slider with a blue handle positioned at 2048 MB. The slider has labels "4 MB" at the left end and "4096 MB" at the right end. To the right of the slider is a text box containing "2048" and "MB". At the bottom, there are "Next" and "Cancel" buttons.

Step 4: Now for creating a virtual hard disk, click on the second option (Create a virtual hard disk now) and then click on create.

The screenshot shows a window titled "Create Virtual Machine" with a back arrow and a close button. The section is titled "Hard disk" in blue. Below the title, it says "If you wish you can add a virtual hard disk to the new machine. You can either create a new hard disk file or select one from the list or from another location using the folder icon." and "If you need a more complex storage set-up you can skip this step and make the changes to the machine settings once the machine is created." It then states "The recommended size of the hard disk is **50.00 GB**." There are three radio button options: "Do not add a virtual hard disk", "Create a virtual hard disk now" (which is selected), and "Use an existing virtual hard disk file". Below the radio buttons is a text box containing "Empty" and a folder icon. At the bottom, there are "Create" and "Cancel" buttons.

Step 5: After creating hard disk now select first option (VDI- VirtualBox Disk Image) for hard disk file type then click on next.

Step 6: Now select first option (Dynamically allocated) for storage on physical hard disk and then click on next.

Step 7: Now you have to select file location where you want to store your files and set size for virtual hard disk then click on create.

Step 8: Now your Virtual Machine is created and ready to use.
