Name: Atul Kumar Set Assigned: A
Page Number: 01 Total Pages: 09

Ques 01: What are the available Web-Based Communication tools. Explain with examples.

Answer: - There are lots of available web-based communication tools: -

- **Gmail:** Google's web mail service is called Gmail (mail.google.com), and at first blush it looks a lot like the other services we discuss in this chapter. Gmail is free, it lets you send and receive email from any web browser, and the interface even looks similar to its competitors. But Gmail offers a few unique features that set it apart from the web-based email crowd.
- **Windows Live Hotmail:** Hotmail was one of the first web-based email services, and it's still one of the largest. But it's not called "Hotmail" anymore Microsoft has moved it into its Windows Live suite of online services and now calls it Windows Live Hotmail. Like most web

mail services, Hotmail (we're going to call it by its old, shorter name) can be accessed from any web browser on any PC anywhere in the world, for free. Microsoft gives you 5GB of storage, not quite as much as you get with Gmail (6GB) or Yahoo! Mail (unlimited).

➤ **Google Talk:** Google Talk is the name of both Google's instant messaging network and its IM client. You can download the Google Talk client and learn more about the Google Talk network at talk.google.com. You can access Google Talk from a web-based Google Talk gadget, a standalone Google Talk client program (similar to what's offered by both AIM and Yahoo! Messenger), or from your Gmail and iGoogle web pages.

➤ **Adobe Acrobat Connect:** The Adobe Acrobat Connect software and service offers personal online "meeting rooms" for large organizations. For \$39/month (and up), you get audio/video conferencing, screen sharing, whiteboard, and chat functionality. The main window is the shared application—that is, the live desktop of the presenter.

- **Convenos Meeting Center:** The Convenos Meeting Center is a web-based conferencing service that starts at \$30/month. For that price, you get online presentations, file and document sharing, whiteboard, polling (the ability to ask questions of your audience), and integration with Skype for conference audio.
- **Genesys Meeting Center:** The similarly named Genesys Meeting Center (www.genesys.com) offers similar features to that of the Convenos service. Genesys gives you online PowerPoint presentations, file and document sharing, chat, desktop video, whiteboard, and polling and E-Quizzes. Pricing is by request only.

Ques 02: Create a To-do list for your class timetable from Monday to Saturday.

Answer: - Steps to create to-do list: -

- First open Google Sheets

- Then open To-do list.

➤ Now create your To-do list as your requirements.

Google Sheets interface showing a spreadsheet titled "To-do list". The spreadsheet displays a timetable for D2110, organized by time slots and days of the week.

	A	B	C	D	E	F	G
1	TIMETABLE D2110						
2	Time	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
3	09am to 10am	PEA516	PEA516	CAP770	BREAK	PEA516	SCAS87
4	10am to 11am	MTH403	MTH403	MTH403	PEA516	CAP471	SCAS81
5	11am to 12pm	CAP470	CAP470	CAP470	MTH403	CAP471	SCAS84
6	12pm to 01pm	BREAK	BREAK	BREAK	BREAK	BREAK	BREAK
7	01pm to 02pm	CAP680	CAP757	CAP756	CAP756	CAP756	SCAS85
8	02pm to 03pm	CAP680	CAP757	CAP615	CAP615	CAP615	SCAS86
9	03pm to 04pm	CAP456	CAP456	CAP456	BREAK	CAP457	BREAK
10	04pm to 05pm	CAP770	CAP770	CAP770	CAP770	CAP457	BREAK

Ques 03: Consider 10 tasks with task size 100, 120, 150, 90, 200, 200, 170, 190, 145, 125 MI and MCT. Calculate Makespan and Average Resource Utilization.

Answer: -

MCT (Minimum Completion Time): MET + OLB 10 Tasks 3 Resources

S.No.	R1 (10MIPS)	R2 (12 MIPS)	R3 (14 MIPS)
T1 (100MI)	10	8.33	7.14
T2 (120)	12	10	8.57
T3 (150)	15	12.50	10.71
T4 (90)	9	7.50	6.42
T5 (200)	20	16.66	14.28
T6 (200)	20	16.66	14.28
T7 (170)	17	14.16	12.14
T8 (190)	19	15.83	13.57
T9 (145)	14.50	12.08	10.35
T10 (125)	12.50	10.41	8.92

T4

$$R1=15+9=24$$

$$R2=10+7.50=17.50$$

$$R3=7.14+6.42=13.56$$

T5

$$R1=15+20=35$$

$$R2=10+16.66=26.66$$

$$R3=13.56+14.28=27.84$$

T6

$$R1=15+20=35$$

$$R2=26.66+16.66=43.32$$

$$R3=13.56+14.28=27.84$$

T7

$$R1=15+17=32$$

$$R2=26.66+14.16=40.82$$

$$R3=27.84+12.14=39.98$$

T8

$$R1=32+19=51$$

$$R2=26.66+15.83=42.49$$

$$R3=32+14.50=41.41$$

T9

$$R1=32+14.50=46.50$$

$$R2=26.66+12.08=38.74$$

$$R3=41.41+10.35=51.76$$

T10

$$R1=32+12.50=44.50$$

$$R2=38.74+10.41=49.15$$

$$R3=41.41+8.92=50.33$$

Total Load on

R1= 44.50

R2 = 38.74

R3 = 41.41

Makespan: 44.50s

Average Resource Utilization $= (R1+R2+R3)/(3 \times R1)$

$= 124.65/133.50$

$= 0.933 = 93.3\%$

Ques 04: What kind of Platform as a service is provided by Azure. Give examples of these services?

Answer: - Azure Platform as a service (PaaS) is a complete development and deployment environment in the cloud, with resources that enable you to deliver everything from simple cloud-based apps to sophisticated, cloud-enabled enterprise applications.

Azure PaaS Services: -

Azure offers four main services of Platform as a Service in which multiple service types host a

custom application or a business logic for specific use cases:

➤ **Web Apps:**

These are an abstraction of a Web Server such as IIS and Tomcat that run applications written in mostly in Java, Python, .NET, PHP, Node.js, etc. These are simple to set up and provide a variety of benefits, available 99.9% of the time which is a key benefit.

➤ **Mobile Apps: -**

The back ends of mobile apps can be hosted on the Azure PaaS easily using the SDKs available for all major mobile operating systems of iOS, Android, Windows, etc. It enables the unique ability of offline sync so the user can use the app even if they are offline and sync the data back when they are back online. Another major benefit is the ability to push notifications allowing sending of custom notifications for all targeted application users.

➤ **Logic Apps: -**

No apps are hosted, but there is an orchestrated business logic app to automate a business process. These are initiated by a trigger when a predefined business condition is met.

➤ **Functions: -**

Functional apps can perform multiple tasks within the same application. These functional apps host smaller applications such as microservices and background jobs that only run for short periods.
